

Quantum security gates can help you improve security quickly. Before or after a break-in.

- Retail security gate solutions
- Industrial security gate solutions
- Institutional security gate solutions
- Office building security gates solutions
- Access control security gate solutions

Quantum Security is a North American company that supplies and installs high quality physical security barriers across the United States, Canada and Mexico. We provide access control solutions - ranging from security gates and burglar bar doors to roll down window security and hallway security gates - to a wide range of companies across the continent.

Whether you are in the business of loss prevention, real estate construction, material handling, property management or retail store management, we can meet the needs of your organization.

We provide security gates, window security grills, expanding security gates, burglar bar doors, hallway security gates, roll down window security and more to businesses of all shapes and sizes.

We work with companies to provide the right commercial security solutions that meet their unique requirements. With more than 17 years of experience in the security gate business, Our team has the knowledge and expertise to respond quickly and effectively to the security problems of just about any business there is.

At Quantum Security, it is our mission to lead the security gate industry in both growth and reputation. We do so by always remaining dedicated to our commitment to integrity, quality and customer satisfaction. It is our goal to give you the security solutions that meet your unique needs and work best for your particular situation.

Our tubular steel security gates are strong and decorative, so they'll stop break-ins while continuing to provide a welcoming appearance to customers. All of our gates and folding window security grills come in a hard shell, high-gloss baked epoxy coating that is made to last. When not in use, our security gates can be neatly folded away to 15% their full size.

We recognize the importance of visible physical security in the fight against crime. Criminals are much more likely to strike a business that does not have any visible security in place than one that is equipped with strong storefront security gates. Our retail secure gates keep your property and your merchandise safe.

Quantum Security Gates provides you with competitively priced, low maintenance and easy-to-operate products. Security when you need it, and easily fold away when you do not.

You must be tired of those all-too-common, fixed-window bar gates that are obtrusive and unsightly. Quantum tubular gates fold neatly out of the way to 15% of their opening size so you don't need to clutter your store with poor presentation during business hours.

Our tubular steel gates are designed to cover the full length of any window or door and up to 98" in height! The product is easy to handle and operate, folds neatly out of the way when not in use. The security grilles serve to block and visually deter intruders, while protecting your inventory from theft.

## FOLD AWAY SECURITY GATES

Easy to use, Fold away security gates

Whether your retail store faces a street or is located inside of a shopping mall, Quantum has products to help you keep your employees, inventory, and customers safe from after-hours intruders.

\* Retail security gates roll back during the day, but deter thieves at night. \*  
Quantum Security products may lower insurance rates for your retail store \*  
Our easy locking system allows you to control access with your existing store keys.

In a storefront location with long and large banks of windows that must be secured with window gates, instead of attaching each gate to the window mullions, the Top Track System lets you secure the gates to each other, not the window frames. As a result, each leading edge of the window gate has a heavy duty roller bearing that feeds into the aluminum top track secured above the window.

## Large storefronts secured with fold away security gates

Quantum Security's tubular steel lattice is a highly effective and competitive storefront entry solution. Because large openings can be secured at an attractive cost, many of our corporate clients tend to favor the security gate lattice system over roll down shutters and aluminum folding grilles. This product's unique hinging feature allows gates that are hinged to one another to be neatly folded away after traversing the top track on bearing rollers.

Our heavy-duty, Double Diamond Lattice Burglar Bar Doors and L206 Locking Post with thumb turn, provides formidable protection for front doors, emergency and man-door exit.

## Double Diamond Security Gates provide maximum protection for man doors and emergency exits

The Quantum Double Diamond Heavy Duty Retractable Door Gate is designed to secure emergency exit doors inside the rear of retail stores, plants and warehouses.

Due to the fact that thieves can easily go unnoticed outside the back entry doors. Many facilities, exit doors tend to be more vulnerable to break-ins. Thieves have all the time in the world to “work their magic” on doors and locks in order to gain entry.

Double diamond webbing and the L206 locking post prevent the hands from accessing the thumb-turn when the security gate is in the locked position.

## Specialty storefront configuration

Quantum security has the experience and products to custom design physical security solutions to meet your specific needs

Side mounted gates including a top gate with bi parting heavy duty double diamond gates that swing forward, provide a unique layer of security.

Mobile security gates are used for temporary security and access control in sporting arenas, airports, food courts, liquor control for grocery store aisles, and temporary work sites to mention a few.

There are no restrictions or limitations to the span that these mobile units can secure. Small individual portable units can open from 14" to 120", each unit can be easily joined together to unlimited lengths. Slam Locks or I206 locking posts may be used to separate the units from each other to allow for access as well as ease of mobility and storage.

## Technical Specifications

All steel used in our products is Carbon Controlled by ISO 9002 Standards

### Lattice

$\frac{1}{2}$ " x  $\frac{1}{2}$ " Tubular steel cold rolled sections, with a carbon content on 0.60% to ensure maximum strength world wide

### Channels
